

Innovation for road construction.

FLEYG® is an innovative solution for ramping steel plates and asphalt milling edges. Until now, steel plates were usually installed using asphalt ramps, which is time-consuming and costly.

Some advantages of FLEYG® at a glance:

- Quick and easy to install
- Safe for all road users
- Reusable
- Significant reduction in noise emissions
- Cost savings compared to asphalt ramps

FLEYG® | Overview

Steel plates are indispensable in road construction and it is impossible to imagine doing without them. That is why it is important to us that all road users—cars, trucks, and heavy goods vehicles as well as cyclists, pedestrians, and wheelchair users—can cross construction site obstacles safely and comfortably.

Until now, steel plates have mostly been laid using asphalt ramps. This is time-consuming and costly. In addition, steel plates installed in this way cause considerable noise when crossed.

The solution is called FLEYG®

The FLEYG® access ramp is made primarily of rubber. The material itself provides noise reduction. FLEYG® is water-repellent and slip-resistant. Reflective markings also make it more visible.

FLEYG® | Benefits

Noise reduction

No rattling when crossing

Position secure – no shifting

Reducing tripping hazards

Tripping hazards are eliminated

Increased slip resistance

The special surface structure significantly reduces the risk of slipping

Safety through visibility

Reflectors make obstacles visible day and night

Quick and easy to install

Ramp can be driven on immediately

Cost savings amortized

after just a few uses

Reusable

can be used for years

Patented

Sustainable cooperation

FLEYG EDGE® | Overview

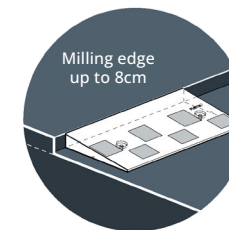

When asphalt is laid, there are always differences in height due to the stages of installation and interruptions in the process. Road renovations and the milling of existing pavement layers also always result in transitions and thus difficult steps and milled edges.

To enable vehicles, bicycles, and pedestrians to drive over these differences in height and to protect the milled edges, asphalt ramps were usually installed. This is time-consuming, cost-intensive, and requires constant maintenance.

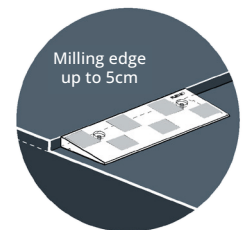

The solution is called FLEYG EDGE®

FLEYG EDGE® is quick and easy to install and secure. The milling edge protection is position-secure and does not shift even at high driving speeds.

As it can be used for years, FLEYG EDGE® pays for itself after just a few uses.
